

Install XR Human Anatomy on Meta Quest

Side-loading guide for Meta Quest 3 and Quest 3S · about 15 minutes the first time, 1 minute after that

What you need

Item	Notes
Meta Quest 3 or 3S	Updated to the latest system software, with a room/space set up.
USB-C data cable	Charge-only cables will not work. The cable that came with the headset is fine.
Windows or macOS computer	For Meta Quest Developer Hub (MQDH) or adb.
Phone with the Meta Horizon app	Logged in with the same Meta account as the headset.
The APK file	XRHumanAnatomy.apk from the repo's Releases page (published once the app is final), or build it yourself from Unity — see the README.

Step 1 — Create a developer account (one time)

- 1 Open the **Meta Horizon Developer Dashboard** (developers.meta.com/horizon) and log in with your Meta account.
- 2 Create a developer **organization / team** (any name, e.g. your own name).
- 3 Verify the account: confirm your **mobile number** for SMS two-factor verification, or add a payment method. Developer Mode stays unavailable until this is done.

Step 2 — Turn on Developer Mode (one time)

- 1 On your phone, open the **Meta Horizon** app and tap the **headset icon** in the toolbar.
- 2 Tap your paired headset → **Headset Settings** → **Developer Mode**.
- 3 Toggle **Developer Mode** on, then restart the headset.

Step 3 — Connect the headset to your computer

- 1 Plug the headset into the computer with the USB-C data cable.
- 2 Put the headset on. When **Allow USB debugging?** appears, tick **Always allow from this computer** and press **Allow**.
- 3 If no prompt appears, open **Quick Settings** → **Settings** → **Developer** and turn on **MTP Notification**, then unplug and re-plug the cable.

Step 4 — Install the APK (choose one option)

Option A · Meta Quest Developer Hub (easiest). Install MQDH from developers.meta.com/horizon, sign in, and open **Device Manager**. In the **Apps** section, drag the APK onto the window or click **Add Build**. Installing again replaces the old version.

Option B · adb command line. With Android platform-tools installed (Windows also needs the Oculus ADB driver):

```
adb devices
adb install -r XRHumanAnatomy.apk
```

adb devices must list the headset as device (not unauthorized). **-r** keeps settings when updating.

Option C · SideQuest. The third-party desktop app SideQuest can also install an APK by drag-and-drop if you already use it.

Step 5 — Launch the app

- 1 Press the Meta button to open the universal menu and open the **Library**.
- 2 Choose **Unknown Sources** from the filter / left sidebar.
- 3 Open **XR Human Anatomy**. Allow **spatial data** access if asked — the app uses your room's floor and walls to place the body.

How to use it

Action	Hands	Controllers
Place the body	Aim with the right hand and pinch (thumb + index). Or tap Show Human Anatomy on the menu.	Aim and press A (right).
Grab a part	Pinch on a highlighted part, move, release.	Hold grip or trigger on the part.
Resize a part	Grab it with both hands and pull apart / push together (0.5× to 3×).	Same, with both controllers.
Put a part back	Release it within 10 cm of its original spot — it snaps back.	Same.
Change layer	Layer button on the menu (left palm).	Y (left).
Reset everything	Reset button on the menu.	X (left).
Show / hide menu	Menu follows your left palm.	B (right).

Layers: Skeleton + Muscles → Skeleton → Muscles → Organs → Nervous System.

Troubleshooting

Problem	Fix
Developer Mode switch is missing	Finish Step 1 (organization + phone verification), then reopen the Meta Horizon app.
adb shows unauthorized	Put the headset on and accept the USB-debugging prompt; re-plug the cable.
Headset not detected at all	Use a data cable and a different USB port; on Windows install the Oculus ADB driver.
App not in the Library	Check the Unknown Sources filter, not “All”.
INSTALL_FAILED_UPDATE_INCOMPATIBLE	An older build signed with a different key is installed. Uninstall it first: <code>adb uninstall com.DefaultCompany.XRHumanAnatomy</code>
Body appears at the wrong height	Run Space Setup again in the headset settings, then press Reset .

Side-loaded apps are for development and testing. Meta’s menus change between system updates; if a name differs slightly, look for the closest match. Official reference: developers.meta.com/horizon → “Set up your device for development”.
